Tools used: BitBucket, SonarCloud, Azure DevOps

Below workflow kicks in when Agency raises the PR (Feature → Release) in admp-ms2 repository.

1. The SonarCloud validation happens on the PR using an ADO pipeline. Which does the static code analysis on SonarCloud based on default rules and custom Quality Gate. This pipeline's successful execution tells us that the build is not fatal and it reports any bugs, vulnerabilities, security hotspots being introduced by the change. It looks like below on the PR.

Abbvie-ADMP / Platform-2.0 / admp-ms2 / Pull requests

Feature/rinvoq09124

feature/rinvoq09124 → release/rinvoq/pm-09124 **OPEN**

Description

- committing the rinvoq css
- committing the rinvoq css config
- committing the rinvoq css files to recommit

Details Files 2 ⚠ Activity

2 of 2 builds passed

- admp-ms2-sonar-cloud**
The build succeeded · 2023-11-07
- SonarCloud**
Quality Gate passed · 2023-11-07
- ☒ 0 tasks
- ☒ 0 Jira issues
- ☒ 1 report

- a.
 - b. CSS files are included from admp-ms2 repo for code coverage report.
 - c. If there are issues found the PR should not be merged until they are either resolved or they are invalid issues and should be ignored from SonarCloud.
 - d. If all good the PR will require 1 reviewers to review and at least one default reviewer to review the PR before it can be merged.
2. Once PR is merged CI/CD ADO pipeline comes in to picture.
 - a. CI → [admp-ms2-release](#)¹ is the build pipeline which is responsible for below.
 - i. Check for the branch creation check.
 - ii. Update the Application name and Promomats#/AWPP ID into the `Content_path.config` file
 - iii. Check if Code quality is still good as per the repository level coding standard
 - iv. create the build artifacts - The Application module zips that are created as part of the maven command.
 - v. publish the build artifacts(snapshots_ms2.zip files) to Azure's Blob storage's specific folder (admp-ms2)
 - b. CD → [cWCM MS2 Release](#)² is the release pipeline which auto triggers whenever a new artifact is published to admp-ms2 folder of Azure blob storage.
 - i. This pipeline further uses task groups to deploy the artifacts to Preview Author and run Preview Publish workflow using CURLs
